Guardian Sun-Guard Product Usage

Guardian Industries' Sun-Guard glass products are intended to be part of an insulating unit. These coatings are not satisfactory for monolithic glazing, and their long-term durability cannot be warranted if they are used in a monolithic application.

Spandrel glass for the Guardian Sun-Guard products can be made by coating the inboard lite of an insulating unit with either a ceramic frit or Opaci-Coat 300 silicone paint on the # 4 surface.
